Swanstone Vanity Tops Beat the Heat

Swanstone solid surface endures beyond cultured marble

ST. LOUIS – Solid surface, high-performance Swanstone [vanity tops](#) make durability look easy, even when compared to cultured marble products. While cultured marble may scuff or stain, Swanstone beats the heat caused by busy families and demanding lifestyles.

Bathrooms take a lot of abuse, especially from people on the go. Spilled acetone, badly placed curling irons or falling shelves have the power to damage a vanity top or sink. But when homeowners invest money in Swanstone, they ensure that the surfaces of their bathrooms can handle wear and tear for years to come. Unlike cultured marble, Swan's color runs all the way through and can never wear away. And because there is no surface gel coating, scratches, scuffs or stains can easily be buffed out with household cleaners.

"When your teenage daughter spills fingernail polish remover on the countertop, you don't have to be concerned about discoloration or damage," said Dave Fisk, vice president sales and marketing, the Swan Corp. "Your bathroom is your sanctuary – we believe you shouldn't have to worry about it becoming marred with every little spill or scratch."

The Swan Corp. offers a style for every décor, from the contemporary Palladio to the traditional Hilo vanity bowls, and each color can be coordinated with Swanstone walls, floors or accessories.

For more information about Swanstone vanity tops and sinks or to find a dealer near you, visit www.swanstone.com.

The Swan Corporation

The Swan Corp. (www.swanstone.com) is a leader in the development, manufacturing and marketing of high-performance surfacing materials and products for the bath and kitchen.
